# What is OURlesson?

OURlesson is a simple and highly effective solution for capturing any form of lesson or training and enabling pupils or trainees to review the content securely online. All a teacher needs is a laptop, webcam and access to the Internet.

OURlesson captures the lesson from a webcam, whiteboards and even from selected pc windows or a combination. Teachers simply start and stop recording the session, review it and then send it to the system. When connected to the Internet the lesson will be automatically published and instantly made available to pupils and students across the Internet.

OURlesson provides a deeper and more personalised learning experience.

OUR LTD has brought together a team of specialists from the education and web content management industries. Their combination of skills has resulted in a powerful system for recording lessons in the most cost effective way possible. Very powerful results are delivered with the minimum of investment through a shared learning environment where infrastructure costs are shared across the customer base. OURlesson is a fully hosted and managed service where upgrading is also centralised. Our aim is to ensure ease of use, very low training overhead and more importantly minimal maintenance overhead of schools IT resources.

Your learning, your education on demand when and where you want it...  
...with **OURlesson**

Lesson is carried out in classroom

Lesson recorded and automatically uploaded to the internet.

Lesson content automatically displays on OURlesson website.
